

Why Legacy Series?

The Legacy Series represents the next chapter of a design philosophy built by industry pioneer Bill Bottoms.

Every Legacy Series truck is engineered around the principles that made the Signature Series legendary:

Capability before compromise

Simplicity where it matters

Strength where it counts

Thoughtfully designed with the operator in mind.

The result is a recovery platform built to serve today's operators and carry forward a legacy of innovation.

A Rotator You'll Actually Want to Tow With

Many rotators excel at recovery but become cumbersome during everyday towing operations. The 50-LSR was engineered with towability as a priority. Its low-profile underlift and balanced design provide the handling, visibility, and functionality operators need for daily service work while still delivering true 50-ton recovery capability.

The 50-LSR comes standard with a 35K underlift and an option for a 50K underlift.

35K Specification

Retracted 51 in; 35,000 lb.

Extended 114 in; 15,000 lb

50K Specification

Retracted 58 in; 50,000 lb.

Extended 138 in; 18,000 lb

Specifications

Main Winches	Dual 50,000 lb
Catch Winches	20,000 lb
Drag Winch	35,000 lb
Hook Height	39 ft
Front Stance	272 in
Rear Stance	222 in
Continuous 360° Rotation	
Total Weight of the Truck Ready to Work	63,000 lb

"Built for the job, not the ego."

50-LSR

50 Ton Legacy Series Rotator A Legacy of Performance.

Built from decades of recovery experience, operator feedback, and the design philosophy of Bill Bottoms' legendary Signature Series rotators, the 50-LSR was engineered without compromise.

More Height. More Stance. More Control.

More Capability.

Recovery Performance Redefined

The 50-LSR was designed around one goal: maximize recovery performance without adding unnecessary complexity.

Designed to Lift

39 feet of hook height

54 degrees of boom elevation

Continuous 360° rotation

Four termination points on every boom stage

Designed to Pull

Dual Sepson 50,000 lb main winches, 20,000 lb catches, and a 35,000 lb drag winch provide the pulling power needed the toughest recoveries.

Designed to Last

The industry's largest single-drive turret delivers exceptional swing power, precise control, and long-term durability where it matters most. Built for operators who demand performance every day.

Operator-Focused Controls

Every control on the 50-LSR was developed with one question in mind: How can the operator work faster, safer, and with greater confidence?

Dual-Side Operation

Full-function control stations on both sides of the truck keep operators where they need to be.

Precision Control

Driver-side direct hydraulic controls and passenger-side proportional joysticks provide the right control style for every operator.

Real-Time Load Monitoring

Integrated load monitoring displays:

Boom angle

Boom extension

Boom tip height

Main winch line tension

Critical recovery information is always visible at both control stations and on the wireless beltpack.

Wireless Capability

The proportional wireless beltpack puts complete recovery control directly in the operator's hands.

Thoughtful Storage Solutions

24-inch deep toolboxes maximize organization and carrying capacity without sacrificing accessibility.

Safer & Secure Access

Roll-up toolbox doors eliminate swing-out hazards and improve safety while working roadside.

Lighting

High-intensity scene lighting, perimeter lighting, and boom well lighting illuminate the entire work area.

Designed for the Real World

Integrated tailboard steps, tie-back points, and equipment storage make the 50-LSR easier to work from day after day.
